*Tensile stress limited based on a 3200 psi allowable stress per ASTM D8427-21 and USACE EM 1110-2-2502. Assumes the simply supported bending case (e.g., an anchored wall) where legs are fully and continuously soil supported and the flat face is in bending tension. Due to the asymmetry of the shape, cantilever designs and those with more complex configurations will most likely require a reduction in the sheet pile's design capacity.

** based on a 1600 in-lbs/in impact strength normal to the sheet per ASTM D4226
