

GR8 Guard is a patented, low-cost drainage inlet protection system designed to keep sediment and debris out of grated storm drain inlets in paved areas. Water rises at least 1.5 inches before reaching the filter causing heavier particles to settle. The system filters storm water above the ground easing visual inspection and

maintenance. The system has a high flow bypass designed to reduce the chance of back ups. It is easy to fasten to the grate with wire ties, has a long life, is resistant to traffic, and reusable. During installation or cleaning, the grate does not need to be removed, reducing installer injuries.
